

Greetings from Dwire Hall at UCCS!

Local employment data has shown some weakness in the first quarter of 2024. According to preliminary estimates from the Bureau of Labor Statistics, payrolls increased by 100 on a seasonally-adjusted basis in March after two consecutive months of decline (-400 in January and -500 in February). While positive, the March figure still represents a very subdued pace – employment growth averaged 588 per month in 2018-19, and 900 last year. It is possible that we are seeing higher interest rates affecting local hiring. With the region's growth and high population turnover, interest-sensitive construction and real estate play a more significant role in our economy than they do nationally. We previously noted the effects of low home sales in slumping sales of furniture, appliances and electronics last year, and now we may be seeing it in payrolls. However, in percentage terms, the payroll decline in the first quarter is quite small and it follows strong growth in the fourth quarter of last year. The unemployment rate is still low by historical standards – 4.0% in March on a non-seasonally adjusted basis (the seasonally adjusted estimate is not yet available).

The BLS released its annual Occupational Employment and Wage Statistics, which provide estimates of employment and wages at a detailed occupational level. The estimates, which are for May 2023, include a "location coefficient" for each occupation. This is a measure of the relative concentration of a particular occupation in a region compared to the US overall. A location coefficient of 2 would mean that the share of an occupation in local employment is twice that of the country. Among the occupations that have high location coefficients in the Colorado Springs metro area are semiconductor processing technicians (9.35), aerospace engineers (5.54), travel and tour guides (3.84) and information security analysts (3.17). The importance of real estate in the local economy is underscored by the coefficient for real estate sales agents (3.05). Our highest location coefficient is for insurance appraisers, auto damage (10.87) – if you think it seems like there are an unusually high number of hail-damaged cars around here, you are right!

Colorado Springs city sales tax collections, which were weak much of last year, are looking healthier so far in 2024 – collections for sales in January and February were 5.3% ahead of the same period of 2023.

Colorado business confidence has improved, according to our friends in Boulder. The Leeds Business Confidence Index, which is based on a survey conducted in March, is above the neutral value of 50 for both the current and following quarter, after having been below 50 since the third quarter of 2022. For the current quarter, all six components are above 50, ranging from expectations of industry hiring, which is just positive at 50.1, to expectations of industry sales at 57.1. Expectations for the state economy are solid at 54.1. All of the components are in positive territory for the third-quarter outlook as well. More details are available in [the Business Research Division's report](#).

Regional business entity filings increased for the first time since the third quarter of 2022. Although the surge in new business formation we can see in this data has abated somewhat, at 4569, filings in the first quarter of 2024 were still well ahead of their pre-pandemic pace; quarterly filings averaged 3039 in 2018-19.

Traffic continues to grow at the Colorado Springs airport – enplanements in the first quarter were 19% higher than in the same period in 2023. Colorado Springs LART tax collections for sales in the first two months of the year were just slightly ahead (1.7%) of the same period last year.

Single-family home prices were up slightly (3.1%) in March and are a little bit higher (2.2%) than a year ago. Sales volume continues to be slow, down 12.5% from a year ago, but the number of active listings is 26% higher than last year. According to Apartment List, the vacancy rate for apartments here continues to be somewhat elevated, at 8.1% in March, compared with 7.1% in metro Denver and 6.7% nationwide. In the first quarter, the total number of dwelling units permitted here was down 5.9% compared with the first quarter of 2023. Single-family permits were up 26.4%, but this was offset by a 27.6% decline in multi-family.

Although we're seeing some softness in local employment, the state and national data continues to come in strong. In the preliminary estimates, US payrolls increased by 303,000 and Colorado added 5,300 jobs in March.

The advance estimate for first-quarter US GDP growth came in at an annual rate of 1.6%, representing a deceleration from the fast pace we saw in the second half of last year. With the exceptions of consumer purchases of durable goods and business investment in nonresidential structures, most components of private domestic demand continued to increase. Overall final sales to private domestic purchasers rose at a 3.1% rate, indicating healthy demand. Residential investment grew at a 13.9% pace. The headline GDP figure was pulled down by imports (i.e., more of those purchases were of things not made here), as well as a deceleration in inventory accumulation.

While inflation is well down from its 2022 peak, the inflation data continues to be scrutinized obsessively for clues about future Fed policy and interest rates. In the first three months of the year, core (i.e. excluding food and energy) inflation ran at a 4.3% annual rate, according to the Fed's preferred measure, the personal consumption expenditures (PCE) price index. That's up from 1.5% in the last three months of 2023. The disappointing inflation data has caused expectations of Fed rate cuts to recede, pushing up long-term rates. The interest rate data in the dashboard reflects an average for March. For the fourth week of April, the average rate on a 30-year mortgage was 7.17%, according to Freddie Mac, up from a low of 6.60 in mid-January.

Thank you for your support!
